

Information Security is the discipline of maintaining the confidentiality, integrity and availability of your company's valuable information assets.

The JBW Group International methodology is comprehensive, business focused and based on international standards (ISO 27001, ISO 20000, ISO 28000) and industry best practices. We can help you develop and implement an Information Security Program to reduce your company's exposure to risk while providing a differentiator in the marketplace.

Achieve your company's strategic business objectives through the effective management of risk

Having a good Information Security story to tell prospective customers and business partners is a differentiator in the marketplace and a regulatory requirement in many businesses today

Now, more than ever, businesses of all sizes and vertical markets face challenges in maintaining information assurance and privacy. With recent Federal legislation and in traditionally regulated industries, Information Security and privacy are legally mandated. Few businesses are in a position to respond quickly and effectively to legal and regulatory requirements and outside assistance is often needed.

“Think about Information Security as you would any other critical aspect of your business; you can't manage what you don't measure.”

John B. Weaver
CISSP, CISA, CISM, CPP

John B. Weaver is an IRCA-certified ISO 27001/ISO 20000 Auditor and British Standards Institute-qualified in ISO 27001 Information Security Implementation with over twenty years experience in Internet and Information Security. He directed Information Security for a global IP network providing security architecture, policy, regulatory compliance, operational processes and security metrics for both public and internal networks. He has provided security consulting to Fortune 1000 and International companies in energy, telecommunications, financial and healthcare vertical markets.

He has trained Law Enforcement on Internet Security related to criminal investigations. He is a member of the Federal Bureau of Investigation's Minnesota chapter of InfraGard, serving on the chapter's Executive Board of Directors. He is a sought-after speaker and frequent media resource on issues of Internet and Information Security, Cyberterrorism, regulatory compliance and protection of the National Infrastructure. ■
